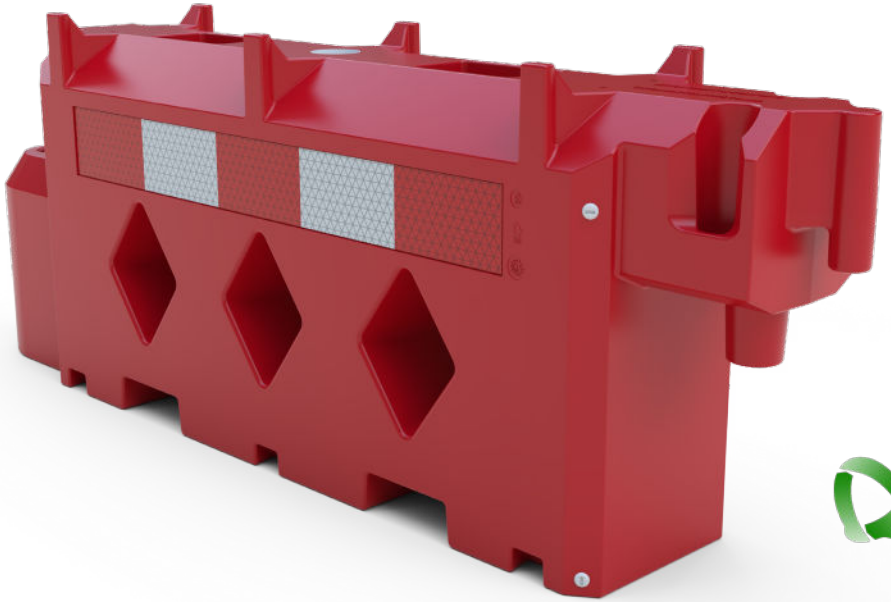
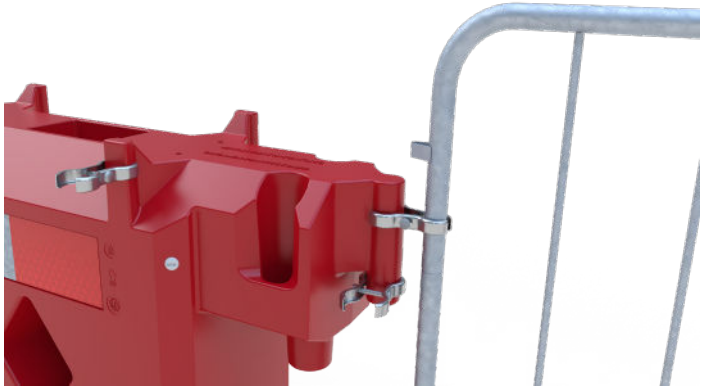
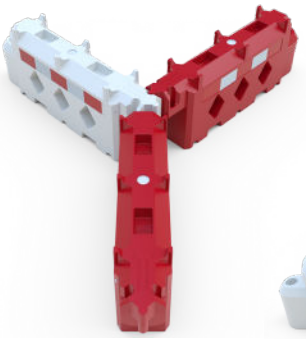
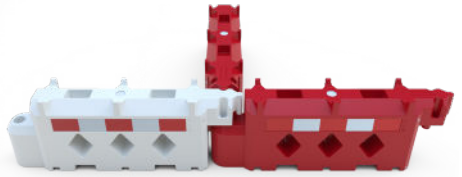
The Nexus Premium Barrier with Unique ‘Jigsaw’ Linking System









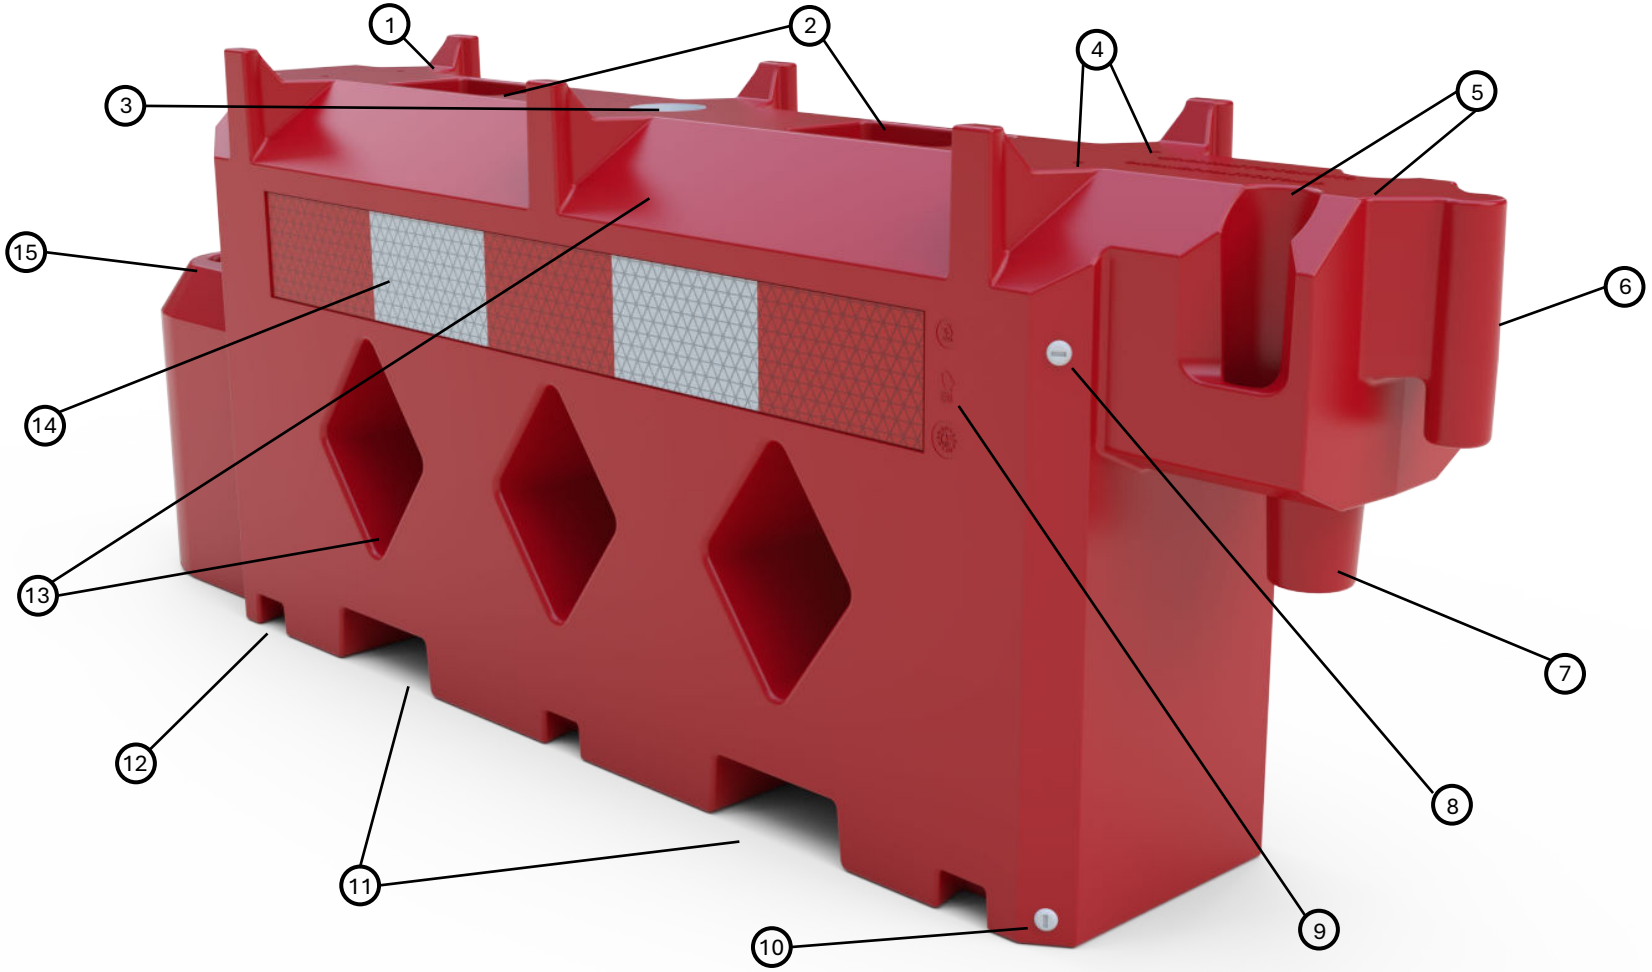
The Nexus Premium barrier is designed to give you greater flexibility on site, the barrier can link to itself in multiple configurations, creating secure perimeters, internal compounds and buttresses. It can also connect with a wide range of established barrier systems, making it easy to extend existing runs or combine different barrier types.

Its innovative ‘jigsaw’ linking design can significantly improve wind load performance, while couplers provide additional security when connecting lighter barriers; helping reduce wind damage and the time and cost associated with barrier re-positioning and correction.

Practical features make installation and maintenance easier too. Self-levelling filling allows the correct ballast level to be achieved from a distance, while the sealed unit reduces the need for frequent water top-ups. For heavier-duty applications, sand filling provides additional weight without the disposal concerns associated with water ballast.

Security is built into the design, with anti-climb windows and a difficult-to-scale top surface helping deter unauthorised access. Mesh and hoarding panels also give you complete flexibility, making the system adaptable to changing project requirements.

NEXUS PREMIUM BARRIER



Features

1. Clipable Stack Lugs Male. 2. Sand Fill Areas. 3. Fill Cap. 4. Symmetrical Panel Attachment Inserts. 5. Jigsaw Links Female.
6. Clipable Jigsaw Links Male. 7. Standard Link Male. 8. Auto Fill Level Bung. 9. Date / Acorn / Recycling Logos
10. Angled Drain Plug. 11. Fork Slots. 12. Stack Lugs Female. 13. Angled Top Surface & Windows.
14. Chapter8 Reflective Area (optional). 15. Standard Link Female
